

Data Management

1. Redis Keys and Values
2. Deleting Keys
3. How to check if a key exists or not
4. How to define keys with expiration
5. How to remove expiration from a key
6. Key Spaces
7. Keys naming conventions

Keys Naming Conventions

- Keep it simple but robust
- Very short keys are often not a good idea
- Try best schema based on your database design

```
employee:101:name="John"  
employee:101:salary="John"
```

- The Max allowed key size is 512MB

8. Keys pattern matching
9. Saving keys information on server
10. Rename a Key
11. Rename a key with caution using RENAMENX
12. Deleting Keys Asynchronously via UNLINK
13. How to find data type of a key value - TYPE
